

Fisher® ES and EAS Sliding-Stem Control Valves

Fisher ES and EAS general-purpose control valves (figures 1 and 2) are used for throttling or on-off control of a wide variety of liquids and gases. Both valve designs have single ports, unbalanced valve plugs, and cage guiding.

In both designs, metal-to-metal seating is standard for all general applications over a wide range of pressure drops and temperatures. Metal-to-PTFE seating is optional for more stringent shutoff requirements.

The Fisher ES product line is available for a wide range of applications, including sulfide and chloride stress-cracking environments common to the oil and gas production industries. To discuss available constructions, contact your Emerson Process Management sales office and include the applicable codes and standards required for these environments.

The easy-e™ Valve Family

ES and EAS valves are part of the versatile easy-e family of Fisher industrial control valves. easy-e valves share the following characteristics.

- Multiple trim material choices
- Trim temperature capability with standard metal seats to 427°C (800°F)
- Flexible graphite gaskets
- Interchangeable, restricted-capacity trims and full-flow trims to match variable process flow demands
- Trim part interchangeability that permits reconfiguring the valve to a different design variation

W2174-1
**FISHER ES CONTROL VALVE
WITH 657 ACTUATOR**

- Different cage/plug styles provide particular flow characteristics for highly-specialized applications. The standard cage comes in three different flow characteristics:
 - quick-opening
 - linear
 - equal percentage
- Whisper Trim™ I cages (figure 1) that attenuate aerodynamic noise in gaseous service are available for all sizes except the NPS 8 ES valve.
- Optional constructions provide material compatibility with NACE MR0175-2002.
- 316 stainless steel packing box parts are standard (including packing flange, studs, and nuts).

Features

- **Compliance with the Clean Air Act**— Optional ENVIRO-SEAL™ packing systems (figure 3) provide an improved stem seal to help prevent the loss of process fluid. The ENVIRO-SEAL packing systems feature PTFE, Graphite ULF, or Duplex packing with live-loading for reduced packing maintenance.
- **Valve Plug Stability**— Rugged cage guiding provides increased valve plug stability, which reduces vibration and mechanical noise.
- **Economy**— Streamlined flow passages provide higher efficiency and greater capacities per initial investment.
- **Cost-Effective Operation**— Increased wear resistance of the standard hardened stainless steel trim means long-lasting service. Also, trim inventory costs are cut because dimensional standardization permits use of most standard easy-e trim parts.
- **Easy Maintenance**— The valve can stay in the pipeline during removal of trim parts for inspection or maintenance.
- **Long-Lasting Shutoff Capability with PTFE Seating**— Controlled compression of optional seat construction protects PTFE disk between metal disk seat and disk retainer (figure 1). The flowstream contacts only the edge of the disk during normal operation.
- **Compliance with European Standards**— Valves are available with dimensions specified by EN/DIN standards. See figure 7 and the note in figure 8.
- **Sour Service Capability**— Unless otherwise noted, references are to NACE MR0175-2002. Optional materials are available to meet NACE MR0103 and NACE MR0175 / ISO15156. Material requirements under these standards vary by edition and year of issue; the specific standard must be specified.

Specifications

Available Configurations

ES: Single-port, globe-style control valve with cage guiding, unbalanced valve plug, and push-down-to-close valve plug action (figure 1)
EAS: Angle version of ES control valve, used to facilitate piping or in applications where a self-draining valve is desired (figure 2)

Valve Sizes

See table 3

End Connection Styles⁽¹⁾⁽²⁾

Cast Iron Valves

Flanged: ES, NPS 1 through 8, including NPS 1-1/2 and 2-1/2 (except NPS 1-1/4), ■ CL125 flat-face or ■ CL250 raised-face flanges per ASME B16.1

Steel and Stainless Steel Valves

Flanged: ■ CL150, 300, or 600 raised-face (RF) or ring-type joint (RTJ) flanges per ASME B16.5,

■ Raised-face (RF) flanges per EN1092-1/B

Screwed or Socket Welding: NPS 1/2 through 2, consistent with ASME B16.11

Buttwelding: NPS 1 through 8 (except NPS 1-1/4).

Schedules 40 or 80 consistent with

ASME B16.25

Maximum Inlet Pressures and Temperatures⁽¹⁾⁽²⁾

As listed below, unless limited by maximum pressure drop or material temperature capabilities

Cast Iron Valves

Flanged: Consistent with CL125B or 250B per ASME B16.1

Steel and Stainless Steel Valves

Flanged: Consistent with CL150, 300, and 600⁽³⁾ per ASME B16.34

Screwed or Welding: Consistent with flanged CL600⁽³⁾ per ASME B16.34

Maximum Pressure Drop⁽²⁾

Same as maximum inlet pressure for specific construction defined above, except where further limited as shown in figures 5 and 6

Valves for NACE MR0175-2002: See figure 5

Shutoff Classifications per ANSI/FCI 70-2 and IEC 60534-4

Metal Seating: Class IV is standard. Class V is optional
PTFE Composition Seating: Class VI

Construction Materials

Body, Bonnet, and Bonnet Spacer or Bottom Flange, if used: ■ WCC carbon steel, ■ CF8M stainless steel, ■ LCC carbon steel, ■ WC9 chrome moly steel; ■ Cast iron body with steel bonnet construction ■ Other material constructions upon request
Valve Plug, Cage, and Metal Seating Parts: See table 4
All Other Parts: See table 9

Material Temperature Capabilities⁽²⁾

Body/Trim Combinations: See tables 4 and 6

Those For NACE Specification: See tables 10 and 11

All Other Parts: See table 9

Flow Characteristics

Standard Cages: ■ Quick-opening, ■ linear, or ■ equal percentage

Whisper Trim: Linear

Flow Directions

ES

Standard Cage: Normally up

Whisper Trim Cages: Always up

EAS

Standard Cage: Without liner, flow up or down; with liner, normally down

Whisper Trim Cages: Always up

Flow Coefficients and Noise Level Prediction

See table 8 and Catalog 12

Port Diameters and Maximum Valve Plug Travels

See table 12

Yoke Boss and Stem Diameters

See table 12

Typical Bonnet Styles

■ Plain or ■ extension. See figures 7 and 8 for standard dimensions. See table 7 for selection guidelines

■ ENVIRO-SEAL bellows seal bonnet. See figure 4 for view of ENVIRO-SEAL bellows seal bonnet. Also, see Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for further information

Specifications (continued)

Packing Arrangements

Standard Material: Single PTFE V-ring

ENVIRO-SEAL Packing: See figure 3

ENVIRO-SEAL Packing Systems in vacuum service:

Standard ENVIRO-SEAL packing systems can be used in vacuum service with packing rings in standard orientation. Do not reverse the ENVIRO-SEAL PTFE packing rings.

Also see Bulletin 59.1:061, ENVIRO-SEAL Packing Systems for Sliding-Stem Valves, for more information.

Approximate Weights

NPS 1/2 and 3/4: 9 kg (20 lb)

NPS 1 and 1-1/4: 14 kg (30 lb)

NPS 1-1/2: 20 kg (45 lb)
NPS 2: 39 kg (85 lb)
NPS 2-1/2: 45 kg (100 lb)
NPS 3: 57 kg (125 lb)
NPS 4: 77 kg (170 lb)
NPS 6: 159 kg (350 lb)
NPS 8: 408 kg (900 lb)

Additional Options

■ Lubricator, ■ lubricator/isolating valve, ■ drilled and tapped connection in extension bonnet for leakoff service, ■ body drain plug, ■ style 3 fabricated extension bonnet made on order to a specific length for cryogenic service, and ■ Whisper Trim III cage for NPS 6 ES valve body

1. EN (or other) ratings and end connections can usually be supplied; consult your Emerson Process Management sales office.

2. The pressure/temperature limits in this bulletin, and any applicable standard limitations should not be exceeded.

3. Certain bonnet bolting material selections may require a CL600 easy-e valve assembly to be derated. Contact your Emerson Process Management sales office for more information

ENVIRO-SEAL Packing System Specifications

Applicable Stem Diameters

■ 9.5 mm (3/8 inches), ■ 12.7 (1/2), ■ 19.1 (3/4),
 ■ 25.4 (1), and ■ 31.8 (1-1/4) diameter valve stems

Maximum Pressure/Temperature Limits⁽¹⁾

To Meet the EPA Fugitive Emission Standard of 100 PPM⁽²⁾

For ENVIRO-SEAL PTFE and ENVIRO-SEAL Duplex packing systems: full CL300 up to 232°C (450°F)

For ENVIRO-SEAL Graphite packing: 104 bar (1500 psig) at 316°C (600°F)

Construction Materials

PTFE Packing Systems:

Packing Ring and Lower Wiper: PTFE V-ring⁽³⁾

Male and Female Adaptor Rings: Carbon-filled PTFE V-ring

Graphite ULF Packing Systems: Graphite rings

Duplex Packing Systems:

Male and Female Adaptor Rings: Carbon-filled PTFE V-ring

Guide Bushings: Carbon graphite

Packing Rings: Graphite composite

Packing Washer: PTFE

Anti-Extrusion Washer: Filled PTFE (not required for graphite or duplex packing)

Lantern Ring: S31600 (316 stainless steel) (not required for graphite packing)

Packing Box Flange: S31600

Spring: ■ 17-7PH stainless steel or ■ N06600

Packing Follower: S31600 lined with carbon-filled PTFE

Packing Box Studs: Strain-hardened 316 stainless steel

Packing Box Nuts: 316 stainless steel

1. Refer to the valve specifications in this bulletin for pressure/temperature limits of valve parts. Do not exceed the pressure/temperature rating of the valve. Do not exceed any applicable code or standard limitation.

2. The Environmental Protection Agency (EPA) has set a limit of 100 parts per million (ppm) for fugitive emissions from a valve in selected VOC (Volatile Organic Compound) services.

3. In vacuum service, it is not necessary to reverse the ENVIRO-SEAL PTFE packing rings.

Table 1. Class VI Shutoff Availability

Valve	Port Size, Inches	Seat	Minimum Seat Load
ES	≤ 7	Metal	300 lbs/lineal inch

VALVE	CAGE/SEAT RING RETAINER	VALVE PLUG	SEAT RING	TRIM TEMPERATURE LIMIT	
				°C	°F
ES	S31600 (316 SST) / ENC	S31600/CoCr-A (alloy 6) seat	S31600	Not a limiting factor	Not a limiting factor

ENVIRO-SEAL, HIGH-SEAL Packing Systems

ENVIRO-SEAL and HIGH-SEAL packing systems offer excellent sealing capabilities. They easily install in your existing valves or can be purchased with new valves. These systems may help prevent the loss of process fluid. The long operational life and reliability of these systems also helps to reduce your maintenance costs and downtime.

For applications requiring compliance with environmental protection regulations, the unique Fisher ENVIRO-SEAL packing system (figure 3) and a unique ENVIRO-SEAL bellows seal system (figure 4) are offered. The emission control packing system helps to keep emission concentrations below the EPA 100 ppm requirement.

For an excellent stem seal in applications that are not environmentally-sensitive, the Fisher HIGH-SEAL

Graphite ULF packing system is offered. The HIGH-SEAL packing system provides excellent sealing at pressure/temperature ratings beyond ENVIRO-SEAL limits.

ENVIRO-SEAL packing systems, available with PTFE, Graphite ULF, or Duplex packing, and the HIGH-SEAL packing systems, Graphite ULF and graphite composite, feature live-loading and unique packing-ring arrangements for long-term, consistent sealing performance.

Class VI Shutoff Capabilities

ES valves with metal seat constructions can provide ANSI/FCI Class VI shutoff capabilities. See tables 1 and 2.

Table 3. Available Valve Body Constructions

VALVE	VALVE SIZE, NPS	BODY MATERIAL AND END CONNECTION STYLE ⁽¹⁾

Style 2 Cast Extension: ■ Optional for NPS 2 through 4 valves with 2-13/16 inch yoke boss diameter ■ Optional for NPS 6 and 8 valves with 3-9/16 yoke boss diameter. Not available for NPS 8 valve in S31600 bonnet material	PTFE V-ring	-101 to 427	-150 to 800
	PTFE/Composition		
	Graphite ribbon/filament	-101 to maximum shown in table 9	-150 to maximum shown in table 9
ENVIRO-SEAL bellows seal bonnet	PTFE	For exceptional stem sealing capabilities. See Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for pressure/temperature ratings.	For exceptional stem sealing capabilities. See Bulletin 59.1:070, ENVIRO-SEAL Bellows Seal Bonnets, for pressure/temperature ratings.
	Graphite ULF		

1. These in-body process temperatures assume an outside, ambient temperature of 21°C (70°F) and no insulation on the bonnet. When using any packing at low process temperatures, a cast extension bonnet may have to be used to prevent packing damage which could result from the formation of valve stem frost. Material selection for trim and other components will also be limiting factors.

CL600 ^① WCC OR LCC BODY

FOR STANDARD METAL SEATING WITH CL600 ^①
316 STAINLESS STEEL (CF8M) BODY

FOR OPTIONAL PTFE SEATING WITH
ALL BODY MATERIALS ^①

C0575-3

Note:

^① Do not exceed the maximum pressure and temperature for the pressure rating of the valve body material used, even though the trims shown may have higher capabilities.

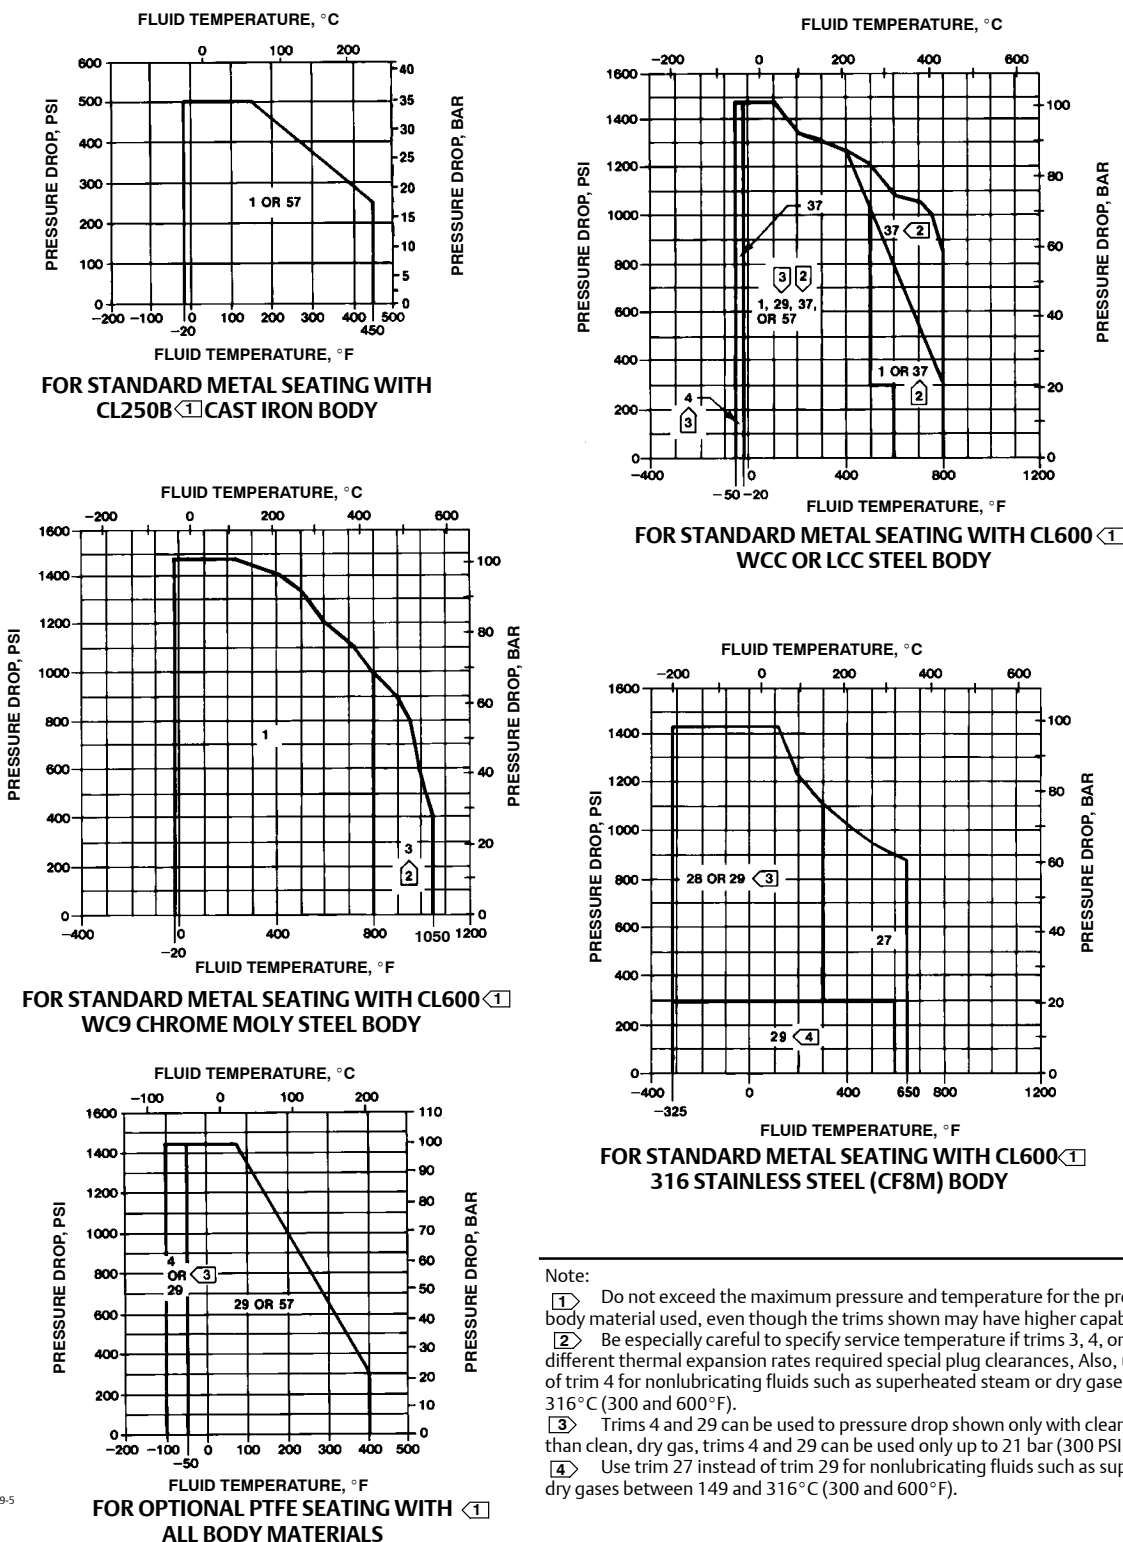

Table 11. Bolting Materials and Temperature Limits for Bolting Compliance with NACE MR0175-2002, NACE MR0175/ISO 15156, and NACE MR0103. Environmental restrictions may apply.

VALVE BODY MATERIAL		BOLTING MATERIAL	TEMPERATURE CAPABILITIES			
			°C		°F	
			Min	Max	Min	Max
Non-exposed bolting (Standard)						
WCC	Studs	Steel SA-193-B7	-7	232	20	450
	Nuts	Steel SA-194-2H				
	Studs	Steel SA-193-B7	232	427	450	800
	Nuts	Steel SA-194-2H				
CF8M (316 SST)	Studs	Steel SA-193-B7 or B8M strain hardened	-48	232	-55	450
	Nuts	Steel SA-194-2H or 8M				
	Studs	Steel SA-193-B8M strain hardened or B7	232	427	450	800
	Nuts	Steel SA-194-8M lubricated or 2H				
Exposed bolting (Optional)						
Requires Derating of Valve ⁽²⁾ When These Body-to-Bonnet Bolting Materials are Used						
WCC and CF8M	Studs	Steel SA-193-B7M	-46 ⁽¹⁾	232	-50 ⁽¹⁾	450
	Nuts	Steel SA-194-2HM				
	Studs	Steel SA-193-B7M	232	427	450	800
	Nuts	Steel SA-194-2HM				
1. Minimum temperature is -29°C (-20°F) with WCC valve body material. 2. Derating is not required for CL300 valves. Derating may be required for valves rated at CL600. Contact your Emerson Process Management sales office for assistance in determining the derating of valves when these body-to-bonnet bolting materials are used.

Figure 6. Typical Trim Use for All Valve Bodies Except Those for NACE Specifications

Note:

- ¹ Do not exceed the maximum pressure and temperature for the pressure rating of the body material used, even though the trims shown may have higher capabilities.
- ² Be especially careful to specify service temperature if trims 3, 4, or 37 are selected, as different thermal expansion rates required special plug clearances. Also, use trim 37 instead of trim 4 for nonlubricating fluids such as superheated steam or dry gases between 149 and 316°C (300 and 600°F).
- ³ Trims 4 and 29 can be used to pressure drop shown only with clean, dry gas. For other than clean, dry gas, trims 4 and 29 can be used only up to 21 bar (300 PSI).
- ⁴ Use trim 27 instead of trim 29 for nonlubricating fluids such as superheated steam or dry gases between 149 and 316°C (300 and 600°F).
